

SUNSHINE GUIDE TO THE KAUNAS AREA, LITHUANIA

LOCATION: Kaunas, Lithuania's second largest city after Vilnius, is located in the central part of Lithuania. The city is situated where the Neris River joins the Nemunas River. Elevations are a little over 100 feet above sea level. Kaunas was the capital of an independent Lithuanian nation between World Wars One and Two, and has fewer Russians and Poles than does the current capital, Vilnius.

COMMENTS: Bright sunshine is likely on 39% of the year's daylight hours. This might range from a low of 13% in December, to a high of 52% from May through August. The year's lowest temperature should be close to -9° some dark January morning, and the highest should be near 87° some sultry August afternoon. Sensible afternoon temperatures (the ones you actually feel) will be pretty much the same as actual ones during the cooler months, and a degree or two cooler than actual ones during the warmer ones. Winter days are short, cloudy, cold, and raw. From the middle of November through the middle of March, the ground is likely to be frozen and snow-covered, and afternoon temperatures will remain below freezing on half the days. Summer days are long, moderately sunny, usually mild to warm—rarely ever really hot.
