

SUNSHINE GUIDE TO THE OUTER HEBRIDES, SCOTLAND

LOCATION: The Outer Hebrides are a group of islands in the North Atlantic Ocean off of the western coast of Scotland. The largest of the islands is Lewis, and the administrative center of the group is on that island at Stornoway. Other major islands include North Ulst, Benbecula, South Ulst, and Barra. Elevations range from sea level to more than 2,000 feet above it in this rugged subarctic archipelago.

COMMENTS: The islands have a four-season sub-arctic climate much moderated by the relatively warm waters of the North Atlantic Drift, the cooler extension of what starts out as the Gulf Stream. Summer afternoons are long and appear even longer by the addition of more than an hour of twilight at dawn and a similar amount at dusk. Skies are quite cloudy, humidities are quite high, and conditions are very windy. Afternoon temperatures are usually mild to cool, with the highest temperature on record only in the high 70's. Winters are exceedingly stormy, with frequent gales. Afternoons are short, overcast, damp and raw. Yet the surrounding waters and the winds that blow off them allow only one winter night in four to drop below freezing. Most days get some precipitation, and the annual average is more than 800 hours of precipitation.
