

SUNSHINE GUIDE TO GOTENBURG AND GOTALAND, SWEDEN

LOCATION: Gothenburg (Goteborg) is the capital and primate city of *Gotaland* (land of the Goths), one of the three medieval kingdoms that joined together to become modern Sweden. The city is located on Sweden's west coast just opposite the tip of Denmark's Jutland peninsula. Gothenburg is situated where the Savean River empties into the Kattegat gulf. Elevations, of course, are close to sea level. The city's Liseberg amusement park is probably Sweden's top domestic tourist attraction.

COMMENTS: Bright sunshine is likely on 40% of the year's daylight hours. This might range from a low of 16% in December, to a high of 51% in June. The year's lowest temperature should be close to 6°, and the highest should be near 83°. Sensible afternoon temperatures (the ones you actually feel) will be pretty much the same as actual ones. During midsummer, the area only gets a couple of hours of true night, but makes up for this by the short, dark days of midwinter. Scandinavian summer weather is characterized by mild afternoon temperatures—rather than hot or even warm ones—and mornings that are generally cool. Winds from the west off the open offshore waters keep the winters from getting as cold as the latitude would suggest.
