

# SUNSHINE GUIDE TO THE BEVERLY HILLS RESORT AREA, CALIFORNIA

LOCATION: The very, very upscale residential and resort community of Beverly Hills is located in the Los Angeles metropolitan area in southwestern California. The city is situated at the southern foot of the eastern end of the Santa Monica Mountains, and west of the Los Angeles downtown area. It is completely surrounded by the city of Los Angeles. Elevations are around five-hundred feet above sea level.

COMMENTS: Bright sunshine is likely on 68% of the daylight hours of the year. This might range from a “low” of 64% in January, to a high of 75% in August. The lowest temperature of the year should be close to 41° at some chilly winter sunrise, and the highest should be near 92° on some windless summer afternoon. Sensible afternoon temperatures (the ones you feel) will be just a touch cooler than actual ones. Beverly Hills is very much under the influence of the nearby Pacific Ocean, whose westerly winds keep summer temperatures from getting as hot and winter temperatures from getting as cold as portions of the metropolitan area farther inland. The Pacific also brings fog. A foggy day in the table is one in which—at some time of day—an object a half-mile away is invisible due to the fog. Anything more transparent than that is considered merely haze or mist. Local sunshine, temperatures, and humidity vary from site to site, depending upon how much fog and low cloud that particular site gets. This, in turn, is dependent upon distance from the sea, elevation, and peculiarities of local topography.
