COMMENTS: Bright sunshine occurs on 50% of the year's daylight hours. This ranges from a low of 34% in cloudy December, to a high of 61% in sunny July. The expected low temperature for the year will be around -12° at some windless winter sunrise, and the high will be near 95° on some sunny summer afternoon. Sensible temperatures (the ones you actually feel) will be essentially the same as actual ones. The area gets the standard mid-latitude four-season year, with winter as the dominant season. The ground will be frozen and frequently snow-covered from late November through late March.
